

Introduction

I am KHALED PASHA, I completed Bachelor's of Technology in Electrical and Electronics Engineering (EEE) in 2011. I can speak in English, Hindi and Telugu. My hobbies are playing cricket in outdoor games and chess in indoor games and I'm also fond of travelling and fishing. I worked in technical department of gold industry for 8 years in UAE. Last year because of covid pandemic I return to India. I am from southern part of India near Hyderabad city.

After returning from Dubai, I was in search of job and I came to know about Edyoda and I was pretty impressed from their offer of paying fees after the course and job guarantee and also the way of approach of talking about the course. I had no knowledge about IT field but the executive explained me so well that I got interest in the course and then I have done my personal research about web development and specifically about React and came to know that with React I can grow faster in my career and also, I saw videos of Qaifi Khan on the web which are freely available and decided to take this course I'm very happy that I choose Edyoda to start my web Development journey and day by day I become more confident by learning new things from the tutors. It's actually very difficult to teach a non-technical guy all this stuff but this course is designed in such a way that I'm from non-technical background and doing it really very well. Really happy to learn from such an amazing tutor Qaifi Khan and other awesome tutors at Edyoda. Till now I'm very happy from the content and support provided by the Edyoda Team and hope that they will be as awesome as they are now.
